

# Statistical measurement issues in intra-EU labour mobility & migration

**Riga,  
11. May 2015**

**Walter J. Radermacher**

# Types of migration: policy interest

- 'Classical' demography based on a change of usual residence (actual or intended stay of 1 year or more)
- Labour mobility = widely understood geographical movement of workers
  - Includes: short and long term labour migrants, seasonal workers, posted workers, cross-border workers
- From outside the EU:
  - Asylum &
  - Managed migration = all legal labour, student and family migration from outside of the EU

# **Intra-EU labour mobility**

-

## **Can we 'catch' a mobile worker?**

# For a while, Mr Bērziņš has been crossing the border to work...

## EU28 - Proportion of resident workers whose workplace is abroad

Data extracted on 27/4/2015

Source: Eurostat Census Hub, Population Censuses 2011.  
Data not available for Finland.

# ...but he then decided to make a labour migration ...

- An increasing number of Latvian citizens work in another Member State from 17,000 in 2005 to 104,000 in 2014
- Most go to the UK

## Latvians in employment outside Latvia

Source: Eurostat (LFS).

# Mr Bērziņš is an employee

Most of the Latvians who emigrated did so to become employees.  
In 2014 the share was 92%.

## Split by professional status

Source: Eurostat (LFS).

# Mr Bērziņš is... a man...

Women and men  
equally move to  
another EU Member  
State

## Split by sex

Source: Eurostat (LFS).

# Mr Bērziņš has a medium level education

**Educational level of Latvians employed in Latvia**

**Educational level of Latvians employed outside Latvia**

Source: Eurostat (LFS)

- Persons with a medium level of education formed the largest group to emigrate throughout the period.
- Latvians that emigrate have a relatively lower level of education compared to Latvians employed in Latvia

# Intra-EU labour mobility

- Is wider than labour migration
- Also includes:
  - Cross-border labour mobility
  - Seasonal workers
  - Posted workers
- Data sources exist at EU level for
  - labour migration
  - cross-border labour mobility

## Main conclusions on **intra-EU labour mobility**

- The available data situation is not flawless
  - LFS sample size does not allow detailed analysis
  - Limited data on return migration
  - No established statistical definition of posted workers
  - Data collections target usual residence definition (actual or intended stay of 1 year or more) thus shortage of data on shorter term labour mobility
- For Latvia data shows
  - Significant increase number of working Latvians in other EU countries in the period 2005-2014
  - Largest group made of persons with medium level of education

# Further developments required

- More timely data on labour migration with post 2021 EU census program
  - "from a snapshot to a movie"
  - facilitating Member States access to administrative data (new and better sources)
- More detailed data on migrants, e.g. origin-destination matrix

## Further developments required, cd ..

- Exchange of mirror migration data among countries encouraged
- Improvement of population registers
  - registration and de-registration
- Posted worker identification
  - requires targeted efforts

# Specific migration issues

—

# Asylum and managed migration

# Information needs in the areas of migration, integration and asylum

The users need to know:

- Where do the migrants come from
- For what reasons are they coming (e.g. work, family, education, international protection)
- What are their modes to come (e.g. visas, specific programmes, irregular arrivals) and for how long they intend to stay
- What are their skills and qualifications

➔ Largely the same needs as for resident population

# What is already collected

- Migration statistics (flows and population stocks)
  - Regulation 862/2007
- Integration of migrants
  - LFS (w/ special module) & EU SILC main data sources
- Asylum
  - Regulation 862/2007
- Managed migration (permits, enforcement)
  - Regulation 862/2007; legislation in the area of legal migration (e.g. EU Blue Cards); gentlemen's agreements

# The number of asylum applicants in the EU up by nearly 200,000 last year

Asylum applicants in the EU, 2008-2014

Source: Eurostat, Asylum statistics.

# What is expected soon

- Further harmonisation of methodology
  - Methodological improvements in Asylum & Dublin data collections from 2015
  - Refugee Conference in Turkey in October to discuss international guidance on refugee statistics
- New statistics to be available during 2015
  - Re-designed 'Dublin' data collection
  - New data on Returns of irregular migrants
  - 2014 LFS module on employment of migrant workers

# What else would be meaningful

- Improvement of administrative registers
- Development of data warehouses and automation of data production in certain areas
- Enhanced exchange of information through stronger systems
- Standardisation of concepts at international level
- Reinforced cooperation within Commission (EASO, Frontex, FRA), with international organisations (e.g. IOM, UNHCR) and between NSI's and the Interior Ministries

**All this requires substantial investments and resources in the Commission and in Member States**

# What remains difficult to measure

- Irregular migration
- Rare migrant populations (e.g. groups of special characteristics)
- Difficulties related to information on ethnicity
- Inherent difficulties in measuring the net figures of asylum seekers at EU level

And why?

- Methodological limitations (e.g. non-harmonised concepts)
- Availability / access to data sources
- Legal constraints, etc.

**Thank you for your  
attention!**
